**An easy & reliable backup  
system for companies.**

Companies must face a growing amount of data. Most of them opt for NAS (Network Attached Storage) based solutions, like the DATA STORAGE FileZerver<sup>®</sup>, which provide storage access on the network for the users.

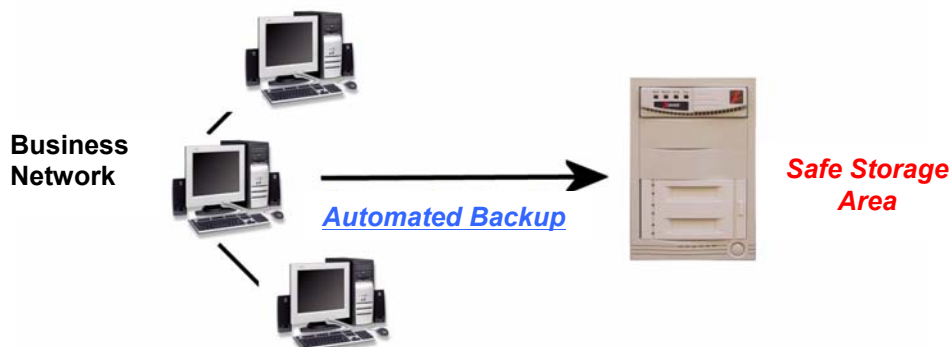

The FileZerver<sup>®</sup> can be installed without any operation on the server nor on the network. It just needs to be plugged, supplied with the domain name server and it fetchs back automatically the users list and their authorisation.

**FULL COMPATIBILITY**

The FileZerver<sup>®</sup> supports the network system of Windows, Linux, Mac OS and Novell (Netware), and the transfert protocol HTTP & FTP for being accessible by **ALL** users of a network.

**SCALABILITY**

The FileZerver<sup>®</sup> hardware configuration is fully evolutive. More memory, a faster processor, more hard disks : at any time you can upgrade your configuration. The Storage capacity can be from 10 Go to almost **2 To** !

**DATA SAFETY**

You can choose the data safety level you need: Raid 1, Raid 5 (SCSI or IDE), access by password, by users or ressources. The file system security is Unix, the most secured.
